

MA323 Lab05 Report

Pavan Kumar A
210123043

1)

$a = -0.5$:

$a = 0$:

$a = 0.5$:

$a = 1$:

Observations:

- For $a = -0.5$ the spread of values is in direction parallel to $y = -x$.
- For $a = 0$ the spread of values is uniform
- For $a = 0.5$ the spread of values is in direction parallel to $y = x$.
- For $a = 1$, determinant of covariance matrix is 0, therefore its inverse does not exist, so we cannot draw its contour plot.
